

Four expert hackers discovered how to block the newest computer threats. Can you tell which virus was neutralized last?

- Exactly one of the viruses has the same initial in its name and system's name it works on.
- Climax didn't neutralize the virus for Ubuntu, nor the Upsidown.
- Jellyfish blocked a virus one month after Superly did.
- The virus for Fedora, which wasn't the Overclock, wasn't stopped in November.
- Among the systems Ubuntu and Debian, one's virus was stopped in September, the other was called Daydream.
- Superly didn't neutralize the Follower. Jellyfish didn't block Upsidown.
- Prodigy didn't stop a virus for Ubuntu nor Windows.
- The Follower was neutralized two months before the virus was stopped by Jellyfish.
- The Overclock infected Windows or it was blocked by Superly.

		Virus				Month				Hacker			
		Daydream	Follower	Overclock	Upsidown	August	September	October	November	Climax	Jellyfish	Prodigy	Superly
System	Debian												
	Fedora												
	Ubuntu												
	Windows												
Hacker	Climax												
	Jellyfish												
	Prodigy												
	Superly												
Month	August												
	September												
	October												
	November												

		Virus				Month				Hacker			
System	Debian												
	Fedora												
	Ubuntu												
	Windows
